

# AF Referral Made Easy

## WHY?

1. Patients with Atrial Fibrillation (AF) have a 2 times greater risk of death than do those without this disease

## WHEN?

1. AF diagnosed in the first year
2. First AF or Paroxysmal AF (AF that spontaneously converts in <1 week)

## WHO?

1. Patients with ADVERSE EFFECTS from AF (i.e., repeat cardioversion, hospitalization, exercise intolerance, CHF and Cardiomyopathy)
2. Patients already on ANTIARRHYTHMIC MEDICATIONS with recurrent AF
3. Patients with SIDE EFFECTS from rate control and antiarrhythmic medications
4. Patients who have LIMITATIONS for medical or antiarrhythmic therapy

We welcome the opportunity to partner with you and your patients.

To refer a patient:
