PRIMUM triggers an alert when one of five risk factors is identified in a patient’s health record

5 Risk Factors*

1. **Early Refill**
   - Of current opioid/benzodiazepine prescription (with >50% remaining)

2. **Multiple Visits**
   - Two or more visits in past 30 days to facilities with onsite opioid treatment

3. **Multiple Prescriptions**
   - Three or more opioid/benzodiazepine prescriptions in past 30 days

4. **Past Overdose**
   - On opioids or benzodiazepines

5. **Positive Toxicology Screen**
   - For blood alcohol, cocaine, or marijuana

*Prescribers choose to either continue or cancel the prescription

Prescribers initiate appropriate follow-up care

---

*Risk factors identified in CDC’s 2016 Guidelines for Prescription Opioids for Chronic Pain

---

**How PRIMUM Works**

---

“We designed PRIMUM not just for Atrium Health, but for other health professionals as well. If more health care systems adopted PRIMUM, it would dramatically reduce the number of opioid prescriptions given to high-risk patients. This could turn the tide of the U.S. opioid crisis over time.”

Joseph Hsu, MD
Vice Chair of Quality, Atrium Health Musculoskeletal Institute
Our goal was to provide actionable information at the moment it is needed most — before writing a prescription. PRIMUM removes physicians’ implicit biases for what an opioid use disorder looks like.

Rachel Seymour, PhD
Vice Chair of Research, Atrium Health Musculoskeletal Institute

**What’s Next**

Through a CDC funded pilot, Atrium Health will document how PRIMUM’s early identification of risk factors affects rates of opioid overdoses, use of medication assisted treatment and alternative pain management therapies, and enrollment in addiction support programs. The grant will also allow Atrium Health to expand behavioral health screening into more of our acute care settings over the next three years.

**Let’s Work Together**

Atrium Health is currently collaborating with North Carolina policymakers on a public awareness campaign that highlights the risks of opioid use and advises people where to turn for help. We’ve also worked with regional partners to better link Prescription Drug Monitoring Programs with electronic medical records, to more rapidly respond to cases of overdose, and to prevent opioid misuse and diversion. Finally, we have worked with our electronic health records provider Cerner on an Opioid Toolkit that offers PRIMUM to participating prescribers free of charge. Contact Meghan Wally at Meghan.Wally@AtriumHealth.org if you would like to learn more about these efforts.

1. Risk factors identified in the Centers for Disease Control and Prevention 2016 Guidelines for Prescription Opioids for Chronic Pain
4. Implementing a Multimodal Path to Recovery (IMPROVE) Pilot: CDC award number R01-CE003001, period of performance: 9/30/2018 – 9/29/2021

---

**Innovation by the Numbers**

**THE PROBLEM**

- 43% of patients who develop an addiction to prescription opioids originally received medication from a health care prescriber
- 50% of patients taking opioids for at least three months remain on opioids five years later and are likely to become life-long users

**OUR CONTRIBUTION TO THE SOLUTION**

**In its first THREE YEARS of use**

- Identified risk factors in 1 in 4 patients
- This prevented nearly 43,000 high-risk prescriptions for controlled substances across Atrium Health

“Our goal was to provide actionable information at the moment it is needed most — before writing a prescription. PRIMUM removes physicians’ implicit biases for what an opioid use disorder looks like.”
