Education: Grand Valley State University
Certified Nurse Practitioner
Location: CMC-NorthEast

One Team, Focused On You

Women's Center for Pelvic Health combines the clinical expertise of fellowship-trained urogynecologists and urologists along with physical therapists, urodynamic experts and a research team for the best care possible. Designed to meet the advanced gynecologic and urologic needs of women, our physicians are among the first in the world to become board-certified urogynecologists, specializing in female pelvic medicine and reconstructive surgery.

There are many different ways to treat pelvic health issues, including a wide range of non-surgical treatments. When surgery is necessary, our physicians specialize in minimally-invasive surgery techniques which usually means a quicker recovery time and less scarring.

We partner with pelvic therapists to provide specialized services to patients with pelvic floor disorders. Physical therapy is a non-surgical treatment method that begins with an evaluation of your posture and structural alignment and of the muscles and soft tissue attaching to and affecting the lower back, hips and pelvis.

We understand that pelvic health conditions affect a woman's quality of life. The journey to a healthier life begins by discussing your condition with your physician. We will develop a personalized treatment plan for each patient and will be with you every step of the way.
