

Piping allows REDCap users to insert previously collected data into a data collection form or survey.

Step 1: Create field for information to be piped from

Field Type: Multiple Choice - Radio Buttons (Single Answ...
Field Label: Use the Rich...
What is your favorite ice cream?
Choices (one choice per line) [Copy existing choices](#)
1, Vanilla
2, Chocolate
3, Strawberry
Variable Name (utilized in logic):
ice_cream

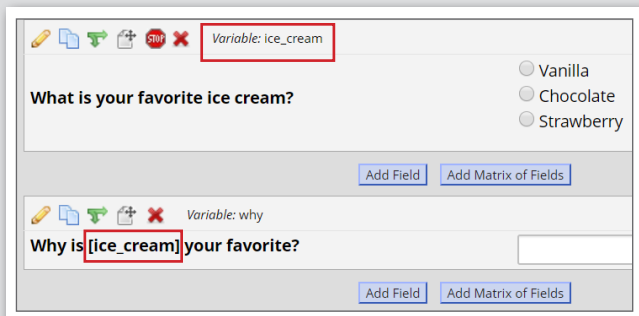

Step 2: Create field for information to be piped into. To pipe previously collected data, insert the variable name from the wanted field in *[brackets]* where you would like the information to appear.

Field Type: Text Box (Short Text, Number, Date/Time, ...)
Field Label: Use the Rich...
Why is [ice_cream] your favorite?

For example, since the variable name is "ice_cream", enter "Why is [ice_cream] your favorite?" into the field label.

Online Designer View

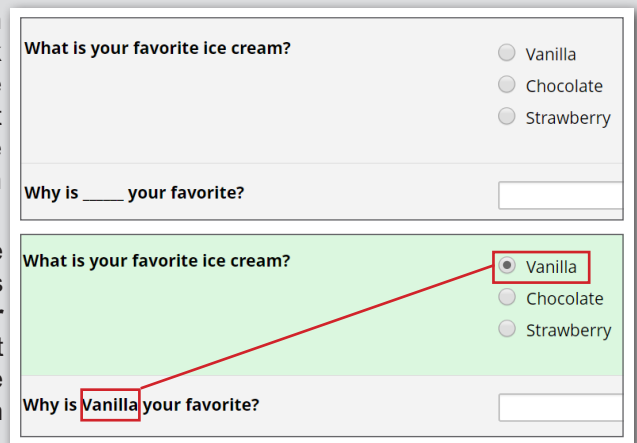

Variable: ice_cream
What is your favorite ice cream?
Vanilla
Chocolate
Strawberry
Add Field Add Matrix of Fields
Variable: why
Why is [ice_cream] your favorite?
Add Field Add Matrix of Fields

The question is blank **before** the participant answers the question

The information is piped in **after** the participant answers the question
