
January 2023

Welcome to our e-newsletter!

Greetings -

The New Year is off to a strong start! We continue to have news to share about the growth of the RegeneratOR Test Bed and Innovation Accelerator - new companies are involved and a former Food & Drug Administration regulatory section chief has joined the team. See these stories below.

We are also in early planning stages for the annual Regenerative Medicine Essentials Course to be held in person, with a first time virtual option. The Regenerative Medicine Foundation will co-join with its World Stem Cell Summit, providing an opportunity like no other in the field. Registration begins in February.

We also want to highlight that the Wake Forest University Graduate School of Arts & Science, in collaboration with our team, is recruiting for the inaugural Fall 2023 class for the Translational Biotechnology masters degree program.

Thank you always for your interest in our research work and endeavors to support the growth of the regenerative medicine field. We look forward to sharing periodic updates on

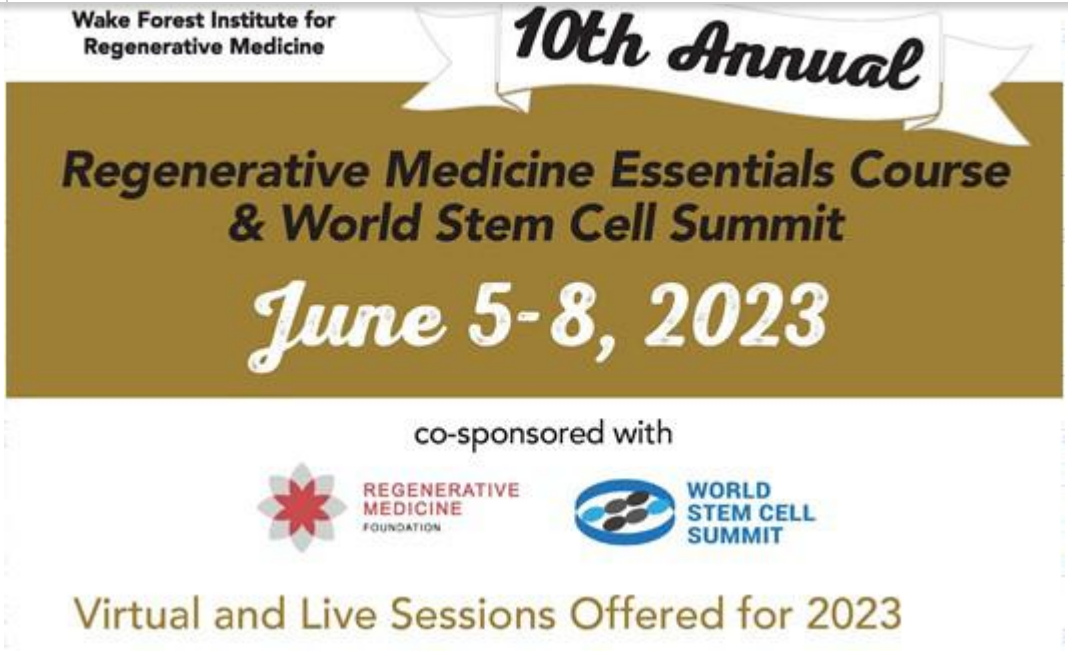
Best Regards -
Anthony Atala

Former FDA Regulatory Section Chief Joins ReMDO

Steven R. Bauer, PhD, has joined the Regenerative Medicine Hub (RegenMed Hub) endeavor. Read more about Dr. Bauer here.

ReMDO collaborates with SAS in New RegeneratOR Testbed with Advanced Smart Manufacturing Capabilities

Alliance designed to optimize complex manufacturing processes and accelerate regenerative medicine development



Registration opens Feb. 15 and early bird pricing ends April 30th. Bookmark this link.

About Wake Forest Institute for Regenerative Medicine: The Wake Forest Institute for Regenerative Medicine is recognized as an international leader in translating scientific discovery into clinical therapies, with many world firsts, including the development and implantation of the

engineering and regenerative medicine were first developed at the institute. WFIRM researchers have successfully engineered replacement tissues and organs in all four categories – flat structures, tubular tissues, hollow organs and solid organs – and 16 different applications of cell/tissue therapy technologies, such as skin, urethras, cartilage, bladders, muscle, kidney, and vaginal organs, have been successfully used in human patients. The institute, which is part of Wake Forest University, is located in the Innovation Quarter in downtown Winston-Salem, NC, and is driven by the urgent needs of patients. The institute is making a global difference in regenerative medicine through collaborations with over 400 entities and institutions worldwide, through its government, academic and industry partnerships, its start-up entities, and through major initiatives in breakthrough technologies, such as tissue engineering, cell therapies, diagnostics, drug discovery, biomanufacturing, nanotechnology, gene editing and 3D printing.
