

# Radiologic Technology Program

## **Program Mission Statement**

Carolinas College of Health Sciences Radiologic Technology Program engages, educates, and provides graduate technologists with a foundation in the performance of entry-level diagnostic procedures in a variety of healthcare settings.

## **Program Goals and Outcomes**

### Goal I: Students will become clinically competent.

SLO I: Students will demonstrate knowledge of radiographic positioning and techniques.

SLO II: Students will practice radiation protection and safety for the patient, self, and others.

## Goal II: Students will develop effective written and oral communication skills.

SLO I: Students will demonstrate effective written and oral communication skills in clinical performance.

SLO II: Students will demonstrate effective written and oral communication skills in didactic performance.

#### Goal III: Students will develop critical thinking skills.

SLO I: Students can adjust exposure factors and vary positioning techniques for a variety of patient conditions to maintain radiographic quality.

SLO II: Students can evaluate radiographic images for appropriate positioning and image quality.
